

What is pharmaceutical project management with us?

project management is the art to manage and co-ordinate human and material resources throughout the lifetime of a project to reach - with the help of up-to-date management techniques - pre-formulated objectives in

- scope
- time
- quality
- and to the content of all players.

co-ordination - co-operation - translation - leading people - and much more ...

- we support you in all development stages of NCEs, biotech drugs, medical devices
- we offer in-house project management training for teams and project leaders
- we introduce a project management matrix into your R&D departments
- we establish development teams for you
- we develop with your teams the general rules, a project management handbook, SOPs etc
- we coach your team leaders, train and support them
- we support and advise you to select the right PM software
- we co-ordinate, monitor and audit all outside-company activities (including CRO selection, supervision and co-ordination)
- we manage a multi project environment for you:
 - scientific evaluation of all your projects
 - creating and realising development plans for preclinical, clinical, submission and pre- and post marketing phases
 - network plans, project information systems, ~ - databases

But we are not only giving you good advise and leave you than alone. We manage also your projects:

- as external teamleader
- by selecting subcontractors for e.g. preclinical work, pharmaceutical development...
- by co-ordinating your CROs

in time, in budget and in the required quality!
